

LOGAN SCHNEIDER

Orem, UT · (801) 360-0588 · loganschneider93@gmail.com · lschneider93.github.io · [LinkedIn](#) · [GitHub](#)

Data scientist and biostatistician (M.S. Statistics) with 3+ years of cancer research biostatistics at Myriad Genetics, building validated machine learning and computer vision systems, and a published open-source GitHub R package. Models measured against ground truth, with uncertainty quantified and limits communicated.

EXPERIENCE

Biostatistician I

Jul 2022 – Oct 2025

Myriad Genetics, Salt Lake City, UT

- Built and applied predictive models (survival analysis, logistic regression, and mixed-effects models) across all stages of research studies, from sample-size and power calculations through final analysis.
- Ensured data integrity across clinical datasets: resolved discrepancies and enforced data-quality standards to support reliable inputs for publication analyses.
- Validated peers' workflows, results, and interpretations to ensure accuracy and reproducibility.
- Communicated findings through study reports and presentations tailored to research and clinical audiences.
- Co-authored *Online Screening and Virtual Patient Education for Hereditary Cancer Risk Assessment and Testing* ([PubMed](#)).

Statistics Advisor & Graduate Student Instructor

Aug 2020 – Aug 2022

Utah State University, Logan, UT

- Advised a Ph.D. candidate on statistical methods, visualizations, and interpretation of results for their research.
- Investigated systematic bias in national gridded snow products and built models to improve prediction accuracy in Utah.
- Instructed Calculus I and Statistics courses of 30–50 students.

PROJECTS

Pickleball Analytics: Computer Vision System

Jan 2026 – Present

- Built an 8-stage Python pipeline (YOLO11, OpenCV, Kalman filtering, court homography) that turns single-camera game footage into annotated rally video and structured shot statistics.
- Evaluated against a 155-clip hand-labeled truth set with precision/recall tracked per release; designed uncertainty-aware line calls that flag ambiguous results instead of guessing. [Case study](#)

Public Health Dashboard

2026

- Client-side dashboard (JavaScript, Plotly.js) fetching live CDC respiratory-illness and openFDA adverse-event data with caching and error handling, no backend. In progress. [Preview](#)

Customer Churn Prediction

2026

- End-to-end churn analysis (Python, XGBoost, SHAP): 0.85 ROC-AUC, VIF-diagnosed multicollinearity in the baseline, and a cost-based retention strategy with break-even analysis identifying \$1.63M revenue at risk.

rsnodas: Snow Water Equivalent R Package (M.S. Thesis)

2021 – 2022

- Published an open-source R package to download national gridded data (SNODAS, PRISM), blend it with SNOTEL observations, and map SWE across Utah at 1 km resolution with an ensemble of GAMs. [GitHub](#) · [Thesis](#)

Earlier Work

2020 – 2021

Sentiment analysis of Disneyland reviews (NLP, Python); car-crash injury-severity prediction comparing Random Forest, SVM, KNN, and neural networks.

EDUCATION

M.S. in Statistics, Utah State University

2022

Thesis: An Ensemble Approach for Mapping Snow Water Equivalent in Utah (published 2023)

B.S. in Mathematics/Statistics, Minor in Russian, Utah State University

2019

TECHNICAL SKILLS & LANGUAGES

Core: R (survival analysis, mixed models, GAMs, ggplot2), Python (pandas, scikit-learn, XGBoost, SHAP), model evaluation & validation, computer vision (YOLO, OpenCV)

Working knowledge: SQL, SAS, Tableau, JavaScript, Plotly, PyTorch, REST APIs, LaTeX, Git · **Languages:** English (native), Russian (fluent)
